

# Rounding Results

## Question

Update the query by adding ROUND() around the calculation and round to two decimal places.

## Answer

```
-- Round duration_hours to two decimal places
SELECT title, ROUND(duration / 60.0, 2) AS duration_hours
FROM films;
```

## Code Explanation

1. SELECT title: Selects the 'title' column from the 'films' table.
2. ROUND(duration / 60.0, 2): Divides 'duration' by 60.0 to convert minutes to hours and rounds the result to two decimal places.
3. AS duration\_hours: Assigns the alias 'duration\_hours' to the calculated value.
4. FROM films: Specifies the 'films' table as the source of data.
