Engineering a prompt

You've been hired by NASA for an exciting new campaign to engage with and encourage more girls aged 12-16 in the United States to consider a STEM career (Science, Technology, Engineering, and Mathematics).

To kick start the campaign, you want to create a draft of four key reasons why this audience should consider a career in a STEM field, and you decide to put ChatGPT to the task. These points will be added to eye-catching posters and flyers that will be distributed to high schools around the country.

Which of the following prompts would most likely produce the highest-quality and relevant response for this situation?

Instructions 50XP

Possible Answers

Hi! I'm creating posters and flyers to engage with and convince girls aged 12-16 in the United States to consider STEM careers. Could you create a list of four reasons why they should consider a STEM career so that I can use it on the flyers and posters?

What are four reasons why girls aged 12-16 should consider a STEM career?

Write four reasons why girls aged 12-16 in the United States should consider a STEM career. These reasons need to be short, so they fit on a poster; for example, "High demand for STEM jobs."

Will you write four reasons that girls should consider stem careers in the united states.

****Question:****

You've been hired by NASA for an exciting new campaign to engage with and encourage more girls aged 12-16 in the United States to consider a STEM career (Science, Technology, Engineering, and Mathematics).

To kick-start the campaign, you want to create a draft of four key reasons why this audience should consider a career in a STEM field, and you decide to put ChatGPT to the task. These points will be added to eye-catching

posters and flyers that will be distributed to high schools around the country.

Which of the following prompts would most likely produce the highest-quality and relevant response for this situation?

Correct Answer:

- Write four reasons why girls aged 12-16 in the United States should consider a STEM career. These reasons need to be short, so they fit on a poster; for example, 'High demand for STEM jobs.'

Explanation:

1. **Why this prompt is effective:**

- This prompt provides clear and concise instructions. It specifies the target audience (girls aged 12-16 in the United States), the number of reasons (four), and the required format (short reasons suitable for posters). Including an example helps ChatGPT understand the expected response format.

Incorrect Answers:

1. **'Hi! I'm creating posters and flyers to engage with and convince girls aged 12-16 in the United States to consider STEM careers. Could you create a list of four reasons why they should consider a STEM career so that I can use it on the flyers and posters?'**

- While polite, this prompt is unnecessarily verbose and lacks specificity about the required response format. It could lead to a less focused output.

2. **'What are four reasons why girls aged 12-16 should consider a STEM career?'**

- This prompt is too generic and does not specify the format or intended use of the reasons, which may result in an output that requires additional refinement.

3. **'Will you write four reasons that girls should consider STEM careers in the United States?'**

- This prompt is vague and does not clarify the intended audience, required format, or purpose, which could lead to an unfocused response.
