Exercise Back to course page

Accelerators vs. decelerators

To understand the true implications of generative AI on the future of business, we must understand the factors that will promote and impede the development of generative AI itself.

Instructions 100XP

Classify each item based on whether it is an accelerator or decelerator of generative AI development.

Take Hint (-30 XP)

Incorrect

Tech companies will improve their generative AI offerings if their competitors are harnessing its power too.

Did you find this helpful? ☒ Yes ☐ No

Drag the items into the correct bucket

Drop items here

Accelerators

- Increasing data availability and lower cost of hardware
- Research into model architecture and performance
- Competition among big tech companies

Decelerators

- Regulation of AI
- Privacy, security and ethical questions
- Explainability and interpretability

Submit Answer

Accelerators vs. Decelerators

To understand the true implications of generative AI on the future of business, we must understand the factors that will promote and impede the development of generative AI itself.

Instructions

Classify each item based on whether it is an accelerator or decelerator of generative AI development.

Classifications

Accelerators

- Increasing data availability and lower cost of hardware
- Research into model architecture and performance
- Competition among big tech companies

Decelerators

- Regulation of AI
- Privacy, security and ethical questions
- Explainability and interpretability

Clarification

Tech companies will improve their generative AI offerings if their competitors are harnessing its power too. This highlights competition as an accelerator for generative AI development.
