

Limiting Results in PostgreSQL: Exercise and Correct Answer

Exercise Explanation:

In this exercise, you will practice using the LIMIT clause in PostgreSQL to restrict the number of rows returned by a query. This is particularly useful when dealing with large datasets and testing queries.

Instructions:

1. Using PostgreSQL, select the 'genre' field from the 'books' table and limit the number of results to 10.

Corrected Full Answer:

```
-- Select the first 10 genres from books using PostgreSQL
```

```
SELECT genre
```

```
FROM books
```

```
LIMIT 10;
```

Answer Explanation:

The LIMIT clause restricts the number of rows returned by the query to 10. This allows for efficient testing and viewing of a small subset of data. Using SELECT genre FROM books LIMIT 10 retrieves the first 10 genres from the 'books' table, helping manage large result sets.
