

What does NULL mean?

Question

What does NULL represent?

Possible Answers:

1. A corrupt entry
2. A missing value
3. An empty string
4. An invalid value

Answer

The correct answer is: 2. A missing value.

Explanation: NULL represents a missing or undefined value in a database. It is not the same as an empty string or an invalid entry, but rather indicates that no data is available for a particular field.
