Which Avocado Size is Most Popular?

Avocados are increasingly popular and delicious in guacamole and on toast. The Hass Avocado Board keeps track of avocado supply and demand across the USA, including the sales of three different sizes of avocado. In this exercise, you'll use a bar plot to figure out which size is the most popular.

Bar plots are great for revealing relationships between categorical (size) and numeric (number sold) variables, but you'll often have to manipulate your data first in order to get the numbers you need for plotting.

pandas has been imported as pd, and avocados is available.

Final Answer

- # Import matplotlib.pyplot with alias plt import matplotlib.pyplot as plt
- # Look at the first few rows of data
 print(avocados.head())
- # Get the total number of avocados sold of each size nb sold by size = avocados.groupby("size")["nb sold"].sum()

Create a bar plot of the number of avocados sold by size
nb_sold_by_size.plot(kind="bar")

Show the plot plt.show()
