Filtering Results

The WHERE clause allows you to filter based on text and numeric values in a table using comparison operators.

Question:
What does the following query return?
```

SELECT title
FROM films
WHERE release_year > 2000;
```
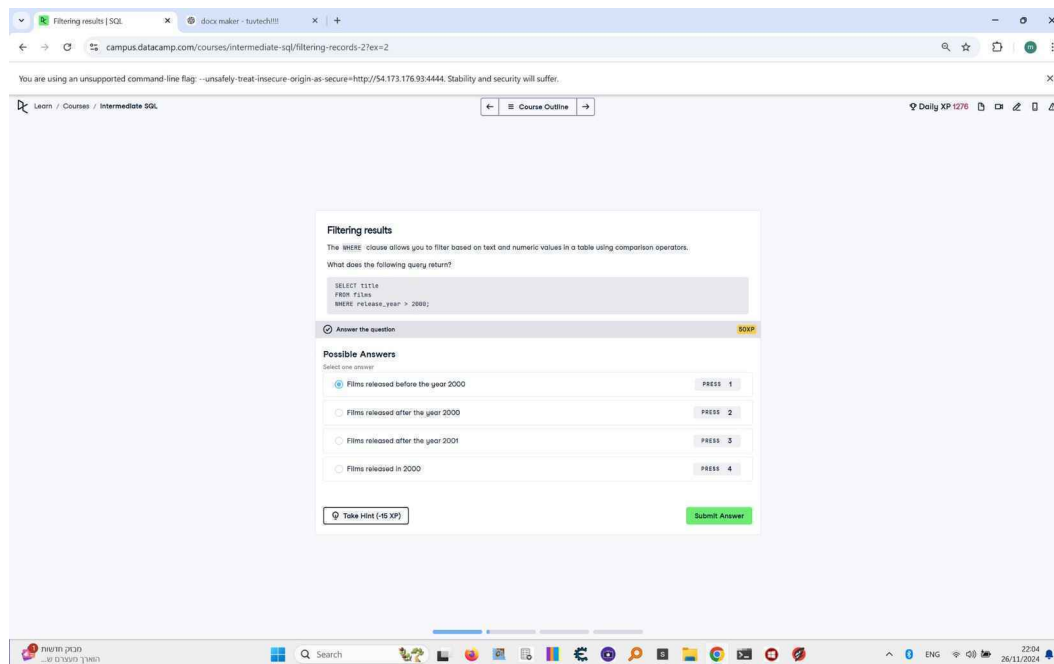

Possible Answers:
1. Films released before the year 2000
2. Films released after the year 2000
3. Films released after the year 2001
4. Films released in 2000

Correct Answer and Explanation:

Correct Answer:
Option 2: Films released after the year 2000

Explanation:

1. The condition `WHERE release_year > 2000` filters for all records where the `release_year` is greater than 2000.
2. This means it will include films released in 2001, 2002, and later, but not those released in 2000 or earlier.

The query specifically retrieves titles of films that meet this condition.
