Establishing the framework

Given ChatGPT's capabilities, it can be tempting to begin integrating it into every business process and product; this would be a mistake without properly scoping ChatGPT's suitability for each use case.

In this exercise, you'll test your knowledge of the key factors when deciding whether ChatGPT can be applied safely and responsibly.

✓ **Instructions** — 100XP

- Classify the following options as being important considerations when validating a use case or not.

💡 Take Hint (-30 XP)

Incorrect

If someone can't validate the quality of a result, you risk surfacing poor quality content to the end-user.

Did you find this helpful?
✓ Yes
✗ No

Important

- Is sensitive data being used?
- Is ownership of the response required?
- Does the response need to be very accurate?
- Can the quality of the response be validated?

Not Important

- Is the prompt requesting code?
- Is the prompt phrased as a question or an instruction?

Submit Answer

Question:

Given ChatGPT's capabilities, it can be tempting to begin integrating it into every business process and product; this would be a mistake without properly scoping ChatGPT's suitability for each use case.

In this exercise, you'll test your knowledge of the key factors when deciding whether ChatGPT can be applied safely and responsibly.

Classify the following options as being important considerations when validating a use case or not.

Important:

- Is sensitive data being used?

- Is ownership of the response required?

- Does the response need to be very accurate?

- Can the quality of the response be validated?

Not Important:

- Is the prompt requesting code?

- Is the prompt phrased as a question or an instruction?

Explanations:

1. **Is sensitive data being used? (Important):**

   - Sensitive data, such as personal information, must be handled carefully to ensure privacy and compliance with data protection regulations. This is a critical factor when evaluating ChatGPT's use in any workflow.

2. **Is ownership of the response required? (Important):**

   - In business contexts, knowing who owns the generated content is important to avoid legal disputes or confusion regarding intellectual property rights.

3. **Does the response need to be very accurate? (Important):**

   - For applications requiring high accuracy, such as medical or legal advice, validating whether ChatGPT meets the accuracy standards is crucial.

4. **Can the quality of the response be validated? (Important):**

   - If the quality of ChatGPT's response cannot be validated, there is a risk of producing incorrect or misleading content, which can harm end-users or business reputation.

5. **Is the prompt requesting code? (Not Important):**

   - While ChatGPT can generate code, the fact that the prompt requests code does not inherently determine whether the use case is valid or important.

6. **Is the prompt phrased as a question or an instruction? (Not Important):**

   - The phrasing of the prompt, while useful for clarity, is not a critical factor in evaluating the suitability or importance of a ChatGPT use case.
